SOCIAL SUSTAINABLE DEVELOPMENT

1. No Poverty

We provide job opportunity to local people in Siem Reap and provide training to them.

This could help local people from poverty to make a living, so they can send their kids to school.

02. Zero Hunger

First of all, villagers in town, they think they cannot have a job since there are many products are being exported. They can sell a few products that lead them to close their stores and become unemployed. In addition, villagers always think to immigrant to other countries and find a job there. Mostly, immigrants can only do some physical work that has no skills at all.

Then, we try to recruit local people that has little skills to become our staff, so they can earn a living to support their family and have those skills to do or apply in the future.

03. Gender Equality

We employ both male and female in our company.

70% are female

30% are male

However, we empower women to work for our company. We endeavour to encourage women especially local people to have a job just like men.

04. Quality Education

We encourage our staff and give them opportunity to study as we think education is the factor for social change in our society.

05. Clean water and Sanitation

When the teams drink dirty water, it may lead them to have many disease such as diarrhea, hepatitis A, typhoid and so on.

Our company provide clean water by purifying the water from the well for them to drink and use for their own purposes. We make sure that they have clean water to use and live in a sanitation lifestyle.

06. Decent Work & Economic Growth

We give our staff a fair income and increase salary every year to make sure they can afford something that they want to buy.

07. Industry, Innovation and Infrastructure

We have new innovative products every year. For instance, we have new invention of lamps. We undertake to use waste material as much as we can. For instance, we innovate waste material from making lamps to make a pillow, scarf, car pillow and so on.

08. Affordable Clean Energy

We make an effort to reduce energy consumption as much as we can. Mostly, we use electric consumption below the maximum charge to save our planet. In addition, when our staff leave home, they need to turn off all devices that use electricity.

09. Sustainable cities and communities

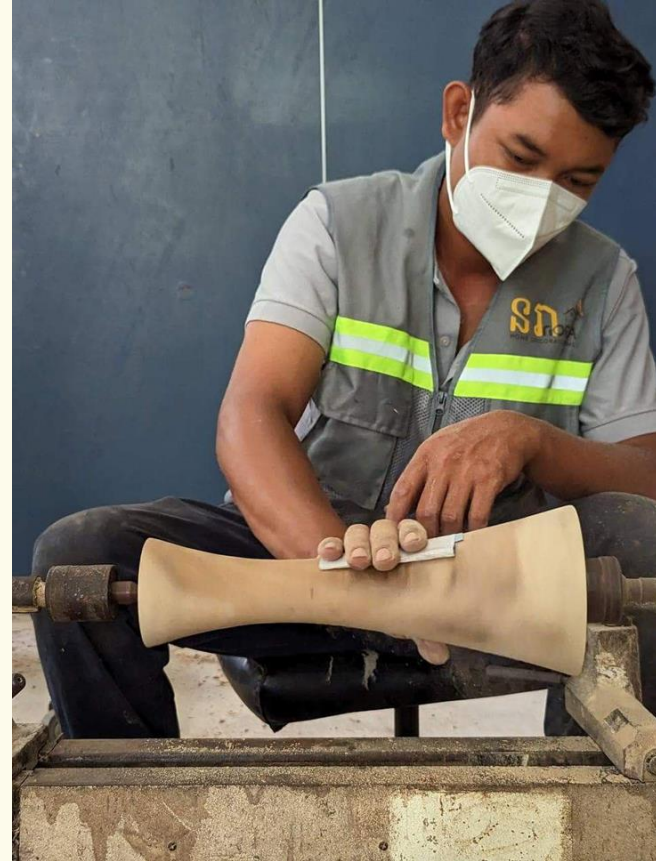

We ensure reducing doing something that is harmful to our environment and our city. We don't make loud sound, polluted the lake, throw the trash in inappropriate areas. We throw the trash where they are allowed us to.

10. Responsible consumption and Production

We guarantee that our production is not polluted too much, which mean we only polluted so little such as trash fire, ... and so on. We are not the big company that produce too much smoke in the air.

11. Life on Land

We substantiate to use tools that does not create smoke into environment.

12. PEACE, JUSTICE AND STRONG INSTITUTIONS

We attempt to solve the conflict by peace that is no violence, no threats in our workplace. Moreover, there is no bribe in our company. We try to solve problems by talking. Every employee and employer have the same rights. We treat everyone with respect and love.

13. Partnerships for the goals

We strive to build partnerships with other suppliers from various countries to build a good relationship in our business to grow. In addition, local companies are also our partnerships as well.

14. Reduced Inequality

In addition, we accept all nationalities such as muslim, christians, buddhism, foreigners. We have a muslim staff in our company.

Our company try our best to reduce inequality and provide jobs to local people to avoid immigrants in our country and give them fair income no matter what nationality they are.

15. Climate Action

Above and beyond all, our company does some contribution to our environment by planting small trees 3 times to save our planet.

I would like to invite you for a Plantation Day in Cambodia

100 - 1,000 Trees in Angkor Forest Protections & Visit 100 Years old Trees
